

# Puppy Vaccination Chart

## DHPP/DHLPP

- Distemper: a highly contagious disease infecting the digestive, respiratory, and central nervous systems.
- Adenovirus (Hepatitis): severe viral infection of the liver (does not affect people).
- Leptospirosis: A severe bacterial infection which causes acute kidney and liver disease.
- Parainfluenza: The viral component of “kennel cough”, a respiratory infection. Highly contagious.
- Parvovirus: a very contagious intestinal infection. It causes bloody diarrhea and may be fatal.

**Bordetella:** The bacterial component of “kennel cough” (tracheobronchitis). Highly contagious.

**Rabies:** Viral disease transmitted in saliva to open wounds or via bite wounds. Required by law for dogs over 16 weeks of age. Fatal to animals and humans.

## Vaccinated Adults

**Boosters:**  
 Rabies: Booster 1 year after initial vaccination, then every 3 years.  
 DHPP: Booster 1 Year after last puppy vaccination, then every 3 years.  
 Bordetella: Booster Yearly  
 Leptospirosis: Booster yearly

**Deworming:** Control and prevent internal parasites with a monthly Sentinel tablet and annual heartworm and fecal exam.

**Fleas and Tapeworms:** Control fleas and prevent tapeworms with Frontline, Revolution, or Comfortis.

*For the safety of everyone’s dogs and our staff, ALL boarding dogs must be current on DHPP, Bordetella, and Rabies vaccinations.*
